Hello Dr. my name is Vinod Bangera and I am from Udupi.

I received a video of your speech through Whatsapp, went through several times and forwarded it to couple of people among them are couple of doctors and advocates.

I have seen and experienced both good, compassionate and helpful doctors and some opposite. Recently I came across Dr. Girish Mennon. who operated on my brother and removed a tumor from third ventricle of the brain. Very simple, approachable and guided us to opt general ward and showed us that we can get good service, treatment and support in the general ward as well.

I am really inspired by your speech. I keep telling and preaching people that earning 300-400 cores cannot get us any where. I ask them simple question, what can you do with that much of money? They keep thinking, it is difficult for them to answer. I give them examples of animals. They kill and eat but until they finish and hungry they don't kill another one. We have become different. We keep amassing wealth property, don't think that if I have profited, that has come from several poor pockets. We need to have profit but there should be limit.

I liked your statements. We need to look through our eyes and better those Laws which stop or slow down work. I also feel that there is a need for disciplined life. Getting a free or insurance covered treatment is not enough. I think it is important for us to show people that preventing disease is very important. Just few minutes of simple exercise can keep us healthy.

If we start free health centers and motivate people to use them regularly and maintain them like you have maintained Jaidava. And for poor, reach them and show them that few minutes of right exercise, right way of doing work (Protecting mouth and noose while working in dusty environment, using personnel protective and safety equipment) can avoid expensive treatment and loss of work day and their earning.

You have inspired me, lot of people listen to your speech. My humble request to you is. Encourage people to lead disciplined life, few minutes of exercise, cycling, swimming even walking to keep healthy and enjoy life.

Thank you Dr. Good wishes and my prayers are with you. Keep doing what you have been doing. God bless you.

I do Cycling 30-40 Km in the morning.

Best Regards
Vinod C bangera,
